Use cost sensitive learning(1:10) for binary classification(0:others)

Drop some files out for test. No shuffle and split the rest data as 80% for training and 20% for validation.

Model consists of three parallel structure. All take raw data. One can get the envelope of the data and feed them to a conv1d network. One can process FFT on the data and feed the output to a conv1d network. The other can process discrete wavelet transform on the data and feed the output to a conv1d network. Then concatenate these three structures output.
